

Stakeholders and Requirements

Discussion 04 – CSC 4033

Readings

The Software Engineering reading selection serves as a good counterweight to the primary focus of this discussion – the User Stories Applied reading selections. Ch.4 of Software Engineering will introduce you to a wide range of ideas and vocabulary, whereas Ch.1 and Ch.2 of User Stories applied will get into the details of writing requirements with the user stories approach. Expect a better blend of new and old ideas from the former, and details on widely used modern approaches in the later.

Required

- 1) Software Engineering, Ch.4 Intro through Section 4.2 (11 pages)
- 2) User Stories Applied, Ch.1 (12 pages)
- 3) User Stories Applied, Ch.2 (11 pages)

Recommended

- User Stories Applied, Ch.7
- User Stories Applied, Ch.16
- Articles from <https://www.mountangoatsoftware.com/>

Learning Outcomes

- Describe one way a software development team interfaces with each of the following: customers/purchasers, users, and at least three other software project stakeholders
- Contrast at least two possible strengths and weaknesses of the user story approach to writing requirements
- Write three functional requirements as user stories that follow INVEST principles given an imaginary software project description, and three non-functional requirements (any style/format)
- Given a set of user stories for an imaginary software project, predict at least one potential benefit and difficulty a development team might encounter based on how well the user stories are written
