

Managing Risk and Product Evolution

Discussion 06 – CSC 4033

Readings

These reading selections are focused on risk management and responding to changing product requirements.

Required

- 1) Software Engineering, Ch.2, Section 2.3 (5 pages)
- 2) Software Engineering, Ch.4, Sections 4.5-4.6 (6 pages)
- 3) Software Engineering, Ch. 22, Sections Intro-22.1 (11 pages)

Recommended

You'll notice that this discussion's learning outcomes run the risk of being lists of answers rather than back and forth discussions. As a part of your preparation, I strongly recommend finding interesting connections to other source materials! This will ensure you have a good bank of contributions ready for the discussion even if the low hanging fruit is swiped up too quickly for you to get a word in.

Learning Outcomes

- List and explain at least five properties that well-written and validated requirements should have
- Discuss at least three causes of change in requirements
- Summarize at least two strategies for planning for and/or managing changing requirements
- Explain some of the costs of requirements changing and at least two strategies for mitigating those costs
- Discuss the importance of identifying and managing risk in software development and summarize a process for doing so
